New Hampshire's maximum waiting period for women who want to obtain an abortion is at least 20 weeks, but the state's law restricting access to the procedure doesn't require abortion clinics to meet the minimum standards for hospital-grade safety precautions. The New Hampshire State House passed the restrictions on abortion again Monday, but added an amendment requiring providers to meet standards for the treatment of surgical emergencies. The bill now heads to the State Senate. Women's rights advocates said the provision would force facilities to build new operating rooms and offer more comprehensive exams, and it would also require a woman to wait at least 20 weeks to terminate a pregnancy. The amendment was added to the bill by the state Senate Judiciary Committee, reports The Associated Press. State Rep. David Campbell, a Republican and committee chairman, said the amendment will "allow law enforcement to intervene immediately" if an emergency like a miscarry occurs. "It strikes the right balance between a woman's medical needs and the law," Campbell added. State Rep. Debra Altschiller, a Democrat, noted that the measure has no exceptions for rape or incest, but instead requires that women be given information on "treatment alternatives." She said the amendment "allows the state legislature to set arbitrary and unconstitutional regulations, for the sole purpose of creating an environment where women feel pressured into adopting a treatment alternative that they don't want." A spokesman for New Hampshire Governor Maggie Hassan (D) said the state Senate is unlikely to accept the amendment, and the House is expected to pass the measure again on Tuesday. "Any compromise should follow the same parameters established in the House, including in regards to access to abortion," the spokesman told The Hill in an email. Several states, including Ohio, recently have passed laws requiring abortion clinics to meet surgical standards similar to those used in hospitals. Supporters of

What's New In TrimTree?

TrimTree is a file deletion utility with a UI similar to a command line. It is a command-line utility that operates on.reg files which contain information about the items on your computer that you specify. Each time TrimTree runs, the.reg files are modified to reflect what is on your computer. This can be done without having to open any user interfaces and makes running the tool very convenient. The UI of TrimTree is basic and does not depend on what is being deleted. The UI in some ways resembles that of an old command line, but we think it is a lot more modern and user friendly. ===Advanced=== Above, I go into basic usage and how the app works. This section will cover some advanced uses of the app: #1 Filtering files by date ranges If you are scanning through your PC and find multiple files that overlap in their age, you can use the date range filter to target only those. For example, if you are scanning through a folder and see 2 files: 5 Minutes Ago.jpg and 7 Minutes Ago.jpg and they both date back a few days, you can select those by entering: TrimTree 2 -msg-ch06 -msg-ch07 -date-range #*-msg-ch06.* -date-range #*-msg-ch07.* Thus, you would be taking into consideration only those files that were created between the specified ages. #2 More complex date ranges You can also work with more complex date ranges by using the same basic approach. For example, if you wanted to delete older files that were older than one week and newer than three weeks, you could use: TrimTree 2 -msg-ch06 -msg-ch07 -date-range #*-msg-ch06.* -date-range (#*-msg-ch07.*) #-msg-ch07.* -date-range (#*-msg-ch06.*) #*-msg-ch06.* I find this especially helpful when I have a folder full of files that need to be deleted. #3 Overwrite all existing files with new ones Instead of deleting the old ones, you can always overwrite the files you want to keep. A simple example would be deleting the older file to replace it with the new
